

# Vivando™ Fungicide

## A New and Unique Mode of Action for the Control of Grape Powdery Mildew

### Technical Information Bulletin

 **BASF**

The Chemical Company

## New Mode of Action

**Vivando** is a highly effective fungicide against grape powdery mildew and it is the only fungicide in the benzophenone chemical class.

The high level of disease control performance from **Vivando** results from the multi-level activity that works continuously to inhibit the infection cycle and reduce the potential for epidemic development.

**Vivando** does not have curative activity. Always apply **Vivando** preventively.

**Stops Infections**

**Limits Lesions  
and Sporulation\***

**Surface  
Migration**

### Stops Infections:

**Vivando** causes deformation of the appressorium to stop infections before they can begin

### Limits Lesions and Sporulation:

**Vivando** also has activity that limits lesion growth, spore production and spore viability\*

### Surface Migration:

**Vivando**'s unique chemistry (release and re-attraction) causes it to "leap-frog" across leaf and grape surfaces for protection beyond the application site

\* **Vivando** does not have curative activity. Always apply **Vivando** preventively.

**Vivando**™  
fungicide

# Using Vivando™ Fungicide for Powdery Mildew Control

Diseases controlled: Powdery mildew

Use Rates: 10-15 fl oz/A

Disease Pressure	Rate (oz/A)	Spray Interval (days)
Typical	10	14
Typical	15	21
Heavy	12.8	14
Heavy	15	17

## Application Timing

Apply preventively for best performance

14-day PHI

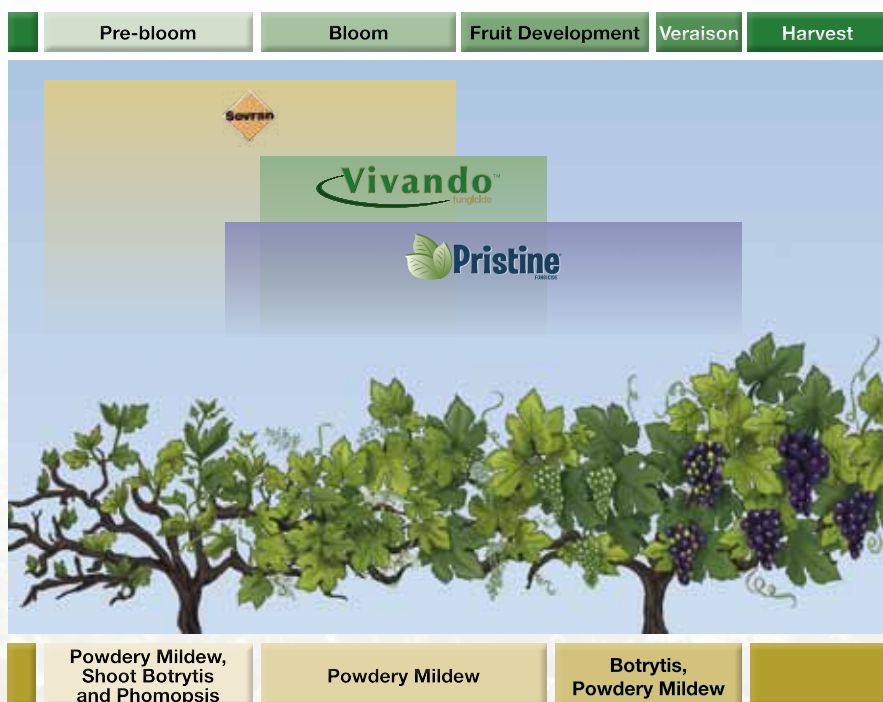

## Adjuvants

Silicon-based adjuvant recommended

## Crop Safety

Based on observations in numerous field trials carried out over several years, it has been shown that **Vivando** can be safely tank-mixed with a range of commercially important fungicides and insecticides without causing damage to grapes. Refer to label for specific recommendations.

## Application Timing

Always read and follow label directions.
